

Wheeled Soft Serve Machine Instructions

- ✓ **Note: This machine cannot be used with any extension cords and must be plugged directly into 110V outlet.**
- ✓ **Do not plug machine into an outlet with other items.**

Follow these instructions to operate the machine correctly. If you have any questions about proper use please call our office and ask for assistance (574) 259-4807. If the machine does not properly operate and it is after business hours choose the operator extension and leave a message in the voicemail.

*** We do not recommend using this machine in direct sunlight. ***

1. Prepare the soft-serve mix according to the package directions – use a 3-5 gallon bucket and a wire whisk.
2. Plug the machine directly into an outlet.
3. Remove the feed tube and fill the hopper with the mix. Leave about an inch in the top of the tank with no mix. Refill tank with mix when the Mix Low light flashes.
4. Turn on the power switch (located to the right of the spout) switch it to the right towards the snowflake. The switch on the left needs to be to the right as well. See diagram on next page.
5. Place a bucket under the spout and push down on the draw valve. Stop when the mix comes out full strength. When the mix stops bubbling in the hopper, place the feed tube back in its original hole (**make sure the small hole on the feed tube is facing downward**).
6. Turn on the refrigeration switch (to the left of the spout) switch it right towards the straight line. It should remain in this position throughout the use of the machine.
7. Open the draw valve with a bucket underneath until you hear the motor come on, if it does not go after one time pull the draw valve again. Let the freeze cycle run for 5-10 minutes. When the freezing motor turns off open the valve with a bucket underneath once again until the mix has completely solidified and is ready to serve (about 30 seconds).

If the freezing motor does not turn on or does not continue to run press the reset button which is located near the switch on the left.

If the mix begins to liquefy stop serving and allow approximately 5 minutes for it to begin freezing again, test before serving. You should hear the freezing motor automatically begin to run again if this occurs. This might happen a few times throughout use.

When you are done with the machine turn the refrigeration switch to the center off position allowing the mix to soften for easier removal. Remove the feed tube from the hopper and place the bucket under the spout and place the power switch to the wash position to the left towards the faucet decal. Let the remaining mix empty out. Run water through the machine to empty out the last of the mix until the water runs clear.
