

Pole Tents

A POLE tent is designed to be used on grassy or dirt areas. *A pole tent uses stakes driven into the ground* and ties attached to them in order to support the tent. The tent can be put on asphalt, but the stakes will have to be driven into it which will create holes. We can fill these holes for a fee.

A pole tent *has at least 1 pole in the center* as the main support. Some people like to decorate the center pole in a tent as a centerpiece, using flowers, vines, various plants or fabric. Yet other people find the center tent pole a nuisance, as it blocks the view or just gets in the way.

Many people enjoy the appearance of a pole tent, and like the way it looks from the outside. The overall shape of the tent has graceful curves, dips and peaks, without any metal pipes showing on the inside.

The height of the center poles will vary depending on the size of the tent. The side poles are typically 7ft. tall. *Sidewalls do not automatically come with the tent* and are a separate fee. Prices include installation & tear down.

Our POLE tent sizes range from a 15'x15' to 60'x210'
